Quick setup — if you've done this kind of thing before

or   HTTPS   SSH   `https://github.com/subh1416/test.git`   ⎘

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

…or create a new repository on the command line

```
echo "# test" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/subh1416/test.git
git push -u origin main
```

…or push an existing repository from the command line

```
git remote add origin https://github.com/subh1416/test.git
```

```
git branch -M main
git push -u origin main
```

…or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

Import code

💡 **ProTip!** Use the URL for this page when adding GitHub as a remote.
